

Доделать первое ДЗ.

- 1) Установить GIT и почитать о его основах. Надо понимать что такое commit, push, pull и как это делать из IntelliJIdea.
- 2) Ознакомиться с лекциями. Прочитать главы 6-8 Шилда, ссылка на книгу в прошлом ДЗ.
- 3) Реализовать методы Person по java докам, запушить в github, прислать мне ссылку.

```
public class Person {
    private final boolean man;
    private final String name;
    private Person spouse;

    public Person(boolean man, String name) {
        this.man = man;
        this.name = name;
    }

    /**
     * This method checks gender of persons. If genders are not equal - tries to marry.
     *
     * If one of them has another spouse - execute divorce(sets spouse = null for husband and wife.
     * Example: if both persons have spouses - then divorce will set 4 spouse to null) and then executes marry().
     *
     * @param person - new husband/wife for this person.
     *
     * @return - returns true if this person has another gender than passed person and they are not husband
     * and wife, false otherwise
     */

    public boolean marry(Person person) {
        ...
    }

    /**
     * Sets spouse = null if spouse is not null
     *
     * @return true - if person status has been changed
     */

    public boolean divorce() {
    }
}
```
